

# 2018 December Celestial Timings

## by Cayelin K Castell

### From the Order of the Wise.

*In the dead of winter the work of the druids continues.  
While our people shelter in warm lodges,  
we whisper to the seedlings in the frozen earth.  
We light the fires that will guide the  
reluctant Sun back from the realms of frost.  
We supervise birth and burial, keeping the living and the dead  
in harmony with the Earth and the Otherworld.  
Druids by Morgan Llwyn*

It has never been more important to whisper to the seeds we are planting for the coming year as we go towards the rare triple planetary alignment of 2020 (a year that implies perfect vision). The question to ponder now is what seeds or vision are we cultivating and planting so they are ready to blossom as we had toward 2020? To find out more about this unique and remarkable time and how to navigate it check out the FREE replay of the Shamanic Astrology Mystery School's Preparing for 2020 Summit at this link <https://shamanicastrology.com/replay-of-online-summit-preparing-for-2020>

### Cultivating Magic

In the meme to the right Harry Potter proclaims: I Love Magic.

Me too. In the late 1980's around 1988, if I am remembering correctly, I read *Medicine Woman* by Lynn V Andrews inspiring me to declare – out loud to myself - I want to live a magical life.

In order for that to happen my first marriage had to end and in fact was already in the process of ending, though I was hanging on and hoping it would change for the sake of me and my 3 children at the time. (Number 4 didn't show up for another 2 years. My youngest son was an unexpected gift - born in 1990 and definitely a major ingredient for the magical life I now live.)

Back in 1988 it took several more devastating events for me to finally give up on my first marriage and to let go of that part of my life. When I did finally let go - magic and miracles began to happen quickly with amazing synchronicity.

It was many years later when I realized all the magical events and miracles I was experiencing with increasing fun and potency began about the time I made the decision to live a magical life.

As mentioned one of the miracles was the birth of my youngest son. Just two weeks prior to that miraculous event, I had another magical and miraculous event occur when I met Daniel Giamario and was introduced to Shamanic

Astrology. Little did I know then it would become a significant expression of my life's work interwoven into every other thing I ever do.

Over this coming year, 2019 I will share more of the magical events that have led me to where I am now. I didn't always know magic was at work, but there were plenty of times I had no doubt what-so-ever. I am immensely grateful for the gift of my children, Shamanic Astrology, and the life I am now living. Stay tuned for more on this journey...

## **We Are Entitled To Miracles!**

### **Lesson 77 from *The Course In Miracles***

Many traditions have stories about magic and miracles that happen around the Solstice Season. When we tune into this timing it is even more potent now due to the Magical Celestial Energy beaming in from the Galactic Center near the Galactic Cross where the December Solstice Sun rises. This is a time to go within and connect with the Miracle you already are and the magic that lives inside you.

Magic and Miracles are everywhere. This Earth is a magical place with magical beings and magical experiences. Anything that inspires us is magical. There are magical landscapes, from the high mountains, to the rolling hills, to the forests, to the desert, to the various water sources including rivers, lakes and oceans. All these places magically support life and are filled with treasures that inspire when we take time to notice and acknowledge the wonder around us.

This includes the wonder of the sky, the deep blue, the cloud beings sometimes bringing storms that cleanse and purify, as well as the multi-colored skies that inspire awe at sunset or sunrise. The Moon, Planets and Stars in their multi-varied relationships add to the Celestial Magic we are blessed with when we take time to look up, notice and appreciate what is going on.

And there is so much more. Magical experiences come in many forms including seemingly spontaneous synchronicities, acts of love and kindness towards ourselves and each other, and the miraculously unexplainable events that are beyond ordinary reality.

This includes miraculous healing that can't be logically explained, magical synchronicities that lead us to the right place or person at the right time, or a myriad of other inexplicable experiences that suggest there is some sort of divine magic and divine intervention at work.

As we approach the ending and beginning of another Solar year you may want to take time to acknowledge with gratitude and deep appreciation how magical and amazing life already is. Gratitude magnetizes and attracts more to be grateful for acting as an essential key for bringing the Magic of this world more fully into our awareness.

### What is in the Name December?

According to Guy Ottewell's *Astronomical Calendar*, December is the 10<sup>th</sup> month of the old Roman calendar that started with March. **Decem** means 10.

### Sky Happenings for December 2018

Find out about the difference between Signs and Constellations in this 15 look at why they are different and why that is significant

<https://www.youtube.com/watch?v=q-svuwjprVc> and in this article <https://cayelincastell.com/the-13th-sign-misunderstanding/>

**Venus** is about 7° from Spica in the south eastern morning sky with the waning Crescent Moon approaching Spica and Venus on December 2 forming a triangle that tightens on December 3 with the Moon and Venus to the upper left of Spica and then Moon and Spica are on either side of Venus early morning on December 4.

**This Venus Moon conjunction marks the first gate** of the descent of the Goddess where she releases her crown (representing the crown chakra) and all the distortions she may have acquired in her connection to the divine.

**Venus** is spectacularly bright and high in the sky as she moves toward greatest elongation exact on January 6, 2019 though Venus is visible about 40° from the horizon from the northern latitudes on December 13. By December 31 Venus is lower on the horizon than she was on December 1. Over the month Venus dims from its maximum brightness of -4.9 to -4.6 as the month and the year end.

**Retrograde Mercury** was with the Sun and Jupiter on November 27, leaping up to connect with Venus though they don't exactly meet this month. They don't actually catch up to each other (meaning within 10 degrees) until April, 2019. As December begins Mercury appears in the morning sky on December 3 at a magnitude of +0.5 by December 6 it is +0.0 by Dec 8. On December 12 Mercury is brightening rapidly to -0.4 or -0.5.

**By December 15 Mercury reaches greatest elongation** in this morning star appearance or 21° from the Sun rising about an hour and 45 minutes before the Sun. Mercury climbs quickly into the morning sky seen in the southeast followed by bright

Jupiter closely passing Mercury a few days before Christmas.

**Jupiter was with the Sun on November 26** now rising after Mercury in the morning sky starting Dec 9 - rising about an hour before the Sun around December 12. Jupiter might be visible with binoculars by December 8. Jupiter's magnitude is -1.7 more than three magnitudes fainter than super bright Venus. Jupiter is visible in the constellation of the Scorpion having moved into the sign of Sagittarius on November 8. **(See Jupiter in Sagittarius Teleclass for details <https://shamanicastrology.com/2018-teleclasses> ).** Jupiter is passing through the constellation of the Scorpion and is just 5° to the upper left of Antares (the heart of the Scorpion) on December 20.

**Jupiter** is within less than 1° of Mercury on December 21 featuring the largest planet (Jupiter) and the smallest planet (Mercury) visible together in the morning sky. Jupiter rises up beyond Mercury by the end of the month. (see star map below for Dec 15)

**Saturn** sets about two hours after the Sun as December begins. Shining around -0.5 magnitude Saturn stands only about eight or 9° above the south western horizon 30 minutes after sunset requiring binoculars to be seen. Around mid-month Saturn is in the Sun's afterglow. 2018 is a year when Saturn doesn't reach conjunction with the Sun for the entire year, though Sun and Saturn meet on January 2, 2019. The last time this happened was in 1989 and before that was 1960 - the next time is in 2048.

**Mars** continues its eastern journey through the constellation of the Waterbearer in the Fish setting around 11:30 PM this entire month. Mars is high in the sky and is beautiful to see in early evening throughout December. Mars (10 Pisces) square the Sun (10 Sag ) on Dec 1.

**Mars** decreases in brightness from magnitude -0.12 to a +0.5. There is a super close conjunction of Mars and Neptune (less than a quarter of a degree from each other) on December 6 for the Americas and December 7 for more eastern time zones - only visible in telescopes. On December 14 Moon and Mars are less than 4° apart as they emerge in twilight setting in the west together before midnight.

**December 05.** The Sun is passing the Great Attractor (14 Sagittarius) a massive energetic force drawing numerous galaxies toward it at about a million miles per hour.

The Great Attractor is apparently far bigger than any galaxy we have ever seen. Astronomers refer to clusters of galaxies as superclusters. The Great Attractor is at the very least a supercluster, or something even bigger.

It appears that the gravity of the Great Attractor is pulling the Milky Way and other nearby galaxies at the rate of a million miles an hour. It isn't easy to discern what this is exactly because it lies behind the plane of our Galaxy, meaning that the gas and dust in our Galaxy obscures the light that emanates from the Great Attractor so it appears much dimmer than the stars and other objects in our Galaxy. More from Nasa on the Great Attractor.

The Great Attractor offers a sense of synchronistic imagery that reminds us that we too are Great Attractors pulling to us our own galaxies based on what we think and feel. This suggests why it is so important to be conscious of what we are attracting to us based on our

thoughts, words, feelings and actions. Each year at this time when the Sun is aligned with the Great Attractor we might imagine that we are attracting at an even quicker rate than we might have previously imagined.

**December 06 and 07, Friday is the Sagittarius New Moon** (15 Sagittarius 07) is **exact at 11:20 pm PST and 2:20 am EST**. Passing by **Galactic Center** about 24 hours later just before the Moon moves into Capricorn at 4:01 am PST and 7:01 EST crossing the **Galactic Cross** where the December Solstice Sun rises and is very likely a tiny crescent Moon will be visible very ear the Galactic Cross on the night of December 8 depending on your horizon line and weather.

**Galactic Center or Hunab Ku as described by the Mayans** is the source of conscious energy that manifests the rhythm and form of our universe. For one extended period of time (at least 72 years from 1962 to 2034) in 26,000 years the December Solstice aligns near Galactic Center energizing ancient/future forgotten knowledge within the DNA (or Hunab Ku) of our own genetic structure. This New Moon closest to Winter Solstice is about receiving a direct download from the Galactic Core.

*Hunab K'u, who can see and understand everything, knows that the time for the great change has come. The word for us to return to the ancient temples has been received from the cosmos. It is here and now that the Great Spirit is beginning to call us back to the magnetic sites. The incarnated Masters are beginning to raise their voice of knowledge in the ancient sites so their teachings can be heard. It is in the ancient sites that the cosmic word to attain wisdom in a gradual manner has been received. (original resource link no longer active)*

**On December 8** when the crescent Moon is most likely to first be visible is the best time to visit a local sacred site or ceremonial location you have created to honor the energy of the New Moon and what you are seeding not only in this new monthly (Moon) cycle but the New Annual Solar Cycle that begins at the December Solstice. The New Moon closest to Solstice is one of the most important New Moon points of the year since it is also the December Solstice that represents the New Moon Point for the Solar Year.

**Join Venus Alchemy for a new Powerful Initiatory Journey** with the Relational Goddess who has not risen onto the world stage since 1863.

This Venus Journey is about restoring our relationship with self, nature, magic and each other.

If you are in an 8 year Venus Return and/or you are exploring relational issues then this life-changing journey is for YOU!

Details <https://venusalchemy.com/libra-morning-star-journey/>

**12/12 and the Feast Day of Our Lady of Guadalupe.** On December 9, 1531, she appeared to Juan Diego on Tepeyac Hill saying she wanted a church built right there. The Bishop asked for proof. When Juan Diego returned to Our Lady and told her the bishop's response, she asked Juan Diego to hold out his tilma (cloak) filling it with the roses of summer. When Juan Diego showed the Bishop the roses in his tilma, they were astonished to also see Our Lady's image imprinted on the tilma. Then the bishop believed and a beautiful church was built, considered the most revered place of worship in Mexico. Images of Our Lady show her standing in a light portal with stars on her cloak and the Moon under her feet.

**Dec 12 Mercury enters Sagittarius at 3:43 pm** traveling through this sign until January 4, 2019. When Mercury travels through Sagittarius the intent is for the mind to serve spirit through an ever expanding quest for awakened states of consciousness. This is because awakened people create an awakened world in the same way green trees create a green forest.

This also means that Mercury is visible in the morning sky within sight of Venus. Mercury passes by the fixed star Dschubba or Isidis currently located at 2 Sagittarius 45 exact on December 15. This star is seen by some cultures as the Eye of the Dragon or the crown on the head of the Scorpion.

Dschubba or Isidis was also called Iclarkrav coined from the Arabic Ikil al 'Akrab, meaning the "Crown of the Scorpion", or sometimes referred to as Iclil; the Arabic word for 'jewel' and was considered a fortunate place to have a planet. [Star Names, p. 367, under Acrab]

Contrary to the view of this star being a jewel - some writings describe Dschubba as unfortunate with associations around shame and disgrace. It has also been described as having the capacity for material gain, but usually through selfishness inspired by envy that can lead to violence and domestic disharmony. This star has also been described as someone with a shrewd, cunning mind and great organizational skills.

I personally have Saturn with this star and have experienced the challenges of being shamed and considered a disgrace by elders in my family line - so much so I was disowned and disinherited as a result.

On the other hand the ability to be organized was a gift while raising four children, especially having twins when my oldest was two requiring me to have it together when they were young. 5 years later my youngest son came along requiring me to again step up my skills with 3 in school and an infant. Eventually I created a way to color code with highlighters - who had to be where and when - on my calendar. During this time I also created work from home - adding yet another level of organizing skills.

The question I am pondering is how do we revision our understanding and experience with this *all seeing eye*, that work for this time now. Rather than feeling like it is unfortunate to have a strong connection with Dschubba, I have come to see these challenges as powerful gifts that have help me cultivate compassion, forgiveness and understanding I wouldn't have otherwise had.

**Mercury** travels through the constellation of the Scorpion and Ophiucus, the serpent holder, who is the master of life force energy and healing, and moves through Galactic Center early in 2019.

### The Gemind Meteor Shower

Peaking on the morning of **December 14** this long-lived prolific meteor shower is worth seen on the days around the peek point. The waxing Crescent Moon will not interfere with observing as it sets several hours before the radiant of this meteor shower shows up highest in the sky.

**December 15. The Sun passes Rasalhague (22 Sagittarius 40) the star marking the crown chakra of Ophiuchus.** The full window of this activation is from December 12 to 18 - illuminating the healing power of the Serpent Bearer, also known as Ophiuchus. Mercury passes this star on December 30.

Rasalhague is a star linked with healing wounds both personally and for society as a whole. The constellation Ophiuchus is located above the Scorpion just east of Hercules' head and covers part of the Milky Way.

This constellation has been seen by many cultures as a man (or woman) holding a large snake. The snake is a separate constellation known as Serpens. [Read More in this Article](#)

## Saturnalia

**December 17 or 19. In ancient Roman times December 19 (sometimes listed as December 17) marked the beginning of Saturnalia**, an annual week-long festival when business stopped, executions and military operations were postponed and the masters served the slaves. It was the Roman way of overturning the rules for a fresh perspective.

Interestingly we are in a time of planetary Saturnalia (based on the Galactic Alignment or when the December Solstice Sun is on the Galactic Cross). This is when the old rules or structures crumble and new structures are seeking form through what we are envisioning and holding sacred in our hearts as we are the seeds for the rebirth of a whole new world, a new Heaven and a new Earth.

**On December 20 and 21** the almost Full Moon is in the constellation of the Hyades very near the bright star Aldebaran. Also on December 21 Jupiter is less than 1° low in the south east before the Sun rises on the longest night of the year in the Northern Hemisphere.

## December Solstice

**The Sun enters Capricorn at 9:49 am marking [the exact Solstice](#) on December 21, 2018.** The Winter Solstice for those of us in the Northern Hemisphere equates to the New Moon point of the year, when we have the shortest day and the longest night.

This is when the Sun rises as far South as it possibly can along the ecliptic. So in the northern hemisphere the days are shortest and the nights are longest. The opposite is true in the southern hemisphere. The exact moment of Solstice, or when the Sun enters Zero Capricorn was on December 20 or 21 up until 1697. Since 1702 the Solstice has been on December 21 or December 22. In 2080 the Solstice will occur on December 20 due to the slight shift that happens over time.

In the 1980's, Daniel Giamario, founder of Shamanic Astrology, began sharing information that the December Solstice marked by zero Capricorn in our Seasonal Cycle was to align with the exact intersection of the Milky Way and the Ecliptic. In the early 1990's astronomer John Muess calculated that this intersection was exact in May 1998. See [Article](#)

Synchronistically, in May, 1998 scientists began noticing a new energy belt of highly charged atoms appearing in the Earth's Van Allen belt. According to Wikipedia...the [Van Allen Radiation Belt](#) is a torus of energetic charged particles (plasma) around Earth, held in place by Earth's magnetic field.

The Van Allen belts are closely related to the polar aurora where particles strike the upper atmosphere and fluorescence. The term Van Allen Belts refers specifically to the radiation belts surrounding Earth; however, similar radiation belts have been discovered around other planets. Also see

[Transformation of the Solar System](#)

This tells us there is something very interesting going on - not just on Earth - but in our entire Solar System and Galaxy. Scientists are considering an imminent Galactic Super Wave burst of light energy coming from our Galactic Center is very possible. These are mysteries worth pondering in this or any magical Dec Solstice Window.

Galactic Super Wave

In the quote below, from Diana L Paxton's book *Ancestors of Avalon*, the questions are being asked by a High Priestess of Atlantis when Atlantis was underg... time we are in now these questions seem relevant as we move from one age to the next and much of what was - is now changing and evolving faster than ever. This is also the question the Shamanic Astrology Mystery School asks as we consider the most effective way to share these mysteries with others – ideally from soul to soul.

***And what of the wisdom that cannot be preserved in scrolls and tokens? What of those things that must be seen and felt before one can understand? And what of the powers that can be safely given only when a master judges the student to be ready for them? What of the wisdom that must be transmitted Soul to Soul?***

~From *Ancestors of Avalon* by Diana L Paxton

**The Waning Gibbous Moon passes Regulus between December 25 and 26.** The waning Crescent Moon is about 7° to the upper left of Spica at dawn on December 30. On December 29 the Last Quarter Moon is visible in the Virgin priestess about 2° from Porrima, the ancient star of prophecy.

## Sirius Overhead at Midnight on New Year's Eve

**Around mid-night local time every year on New Year's Eve the triple star Sirius** is directly overhead energizing our experience of the high magic Sirius sends to Earth at this time. Sirius is the brightest fixed star in our sky and so when Sirius reaches the zenith or is directly overhead at mid-night it touches the Earth with a magnificent download of Sirian light energy just as humanity is embracing another Gregorian Calendar year.

The light codes from Sirius infuse the Earth's magnetic grid with actively radiant divine energy. This helps to inspire and awaken humanity to greater love and understanding when we are open to receiving this infusion.

The path of Sirius – over the Freedom Tower in New York City created from a 78-image composite, spaced 30 seconds apart. By Gowrishankar Lakshminarayanan

Recent findings reveal we are "downstream" from [Sirius](#) in the part of the galactic arm our solar system resides in. If God is the bringer of life (energy) and light, Sirius fits the description — it transmits its energy (highly charged particles) to our entire system via the magnetic field lines. We literally receive energy from Sirius!

2019 promises to be a very interesting year leading up to the rare 2020 triple planetary alignment. Find out more in the [An overview of 2019](#) with me and Daniel Giamario.

**Constellations worth noting:** In early December by about 10 pm the Pleiades are high overhead and Orion completes his ascent over the Eastern horizon. In late December Betelgeuse, red/orange star marking the shoulder of Orion to the left of Orion's belt, is rising around 8 pm local time. Castor and Pollux, the brightest stars of the Twins are to the left of Orion. Around 9 pm, Procyon and Sirius rise nearly at the same time in the east. Betelgeuse, Procyon and Sirius form a huge equilateral triangle also known as Heaven's Gate and the Milky Way passes through this triangle. **Full Moon in Cancer is Dec 22 at 9:49 pm PST on the Galactic Cross at the Galactic Edge between the Twins and the Bull and above Orion and Sirius.**

See Cassiopea (at top of the above image). The brightest star Alpha Cassiopeiae (or Shedar - the breast - as it is known by the ancient Arabs) is a 2.24 magnitude. 42 times bigger than the diameter of the Sun, Shedar is about 228 light years away from Earth.

## December 2018 Timings

all Times are in the Pacific Time Zone

Date	Time is PDT	Planet	Sign	Aspect	Sign	Sign
Dec 1 2018	4:11:53 AM	Mercury R	00°Sg00' R	Re-enters	Scorpio	00°Sg00' D
