

# As Above So Below, As Within So Without Is The Primary Law Of The Universe

In the Accomplishment of the Miracle of One Thing Living Heaven On Earth

Our ancestors made use of the "power" inherent within individual stars, the esoteric knowledge of the constellations, the secrets of celestial computations and of cosmic order.

The cultures who possessed that vast body of wisdom in its entirety were able to answer vital questions about the nature of the universe and make giant leaps in evolution.

They taught that all life is sacred and that all is alive, every star, every planet, every tree and stone...everything. That knowledge gave them a technology that still puzzles us today.

~Page Bryant

Consider letting go of the need to know from the perspective of the mind.

This allows you to tap into an innocence that opens you to the wonders of the Sky Mysteries as they relate to our experience here on Earth.

### Defining Synodic, Tropical and Sidereal

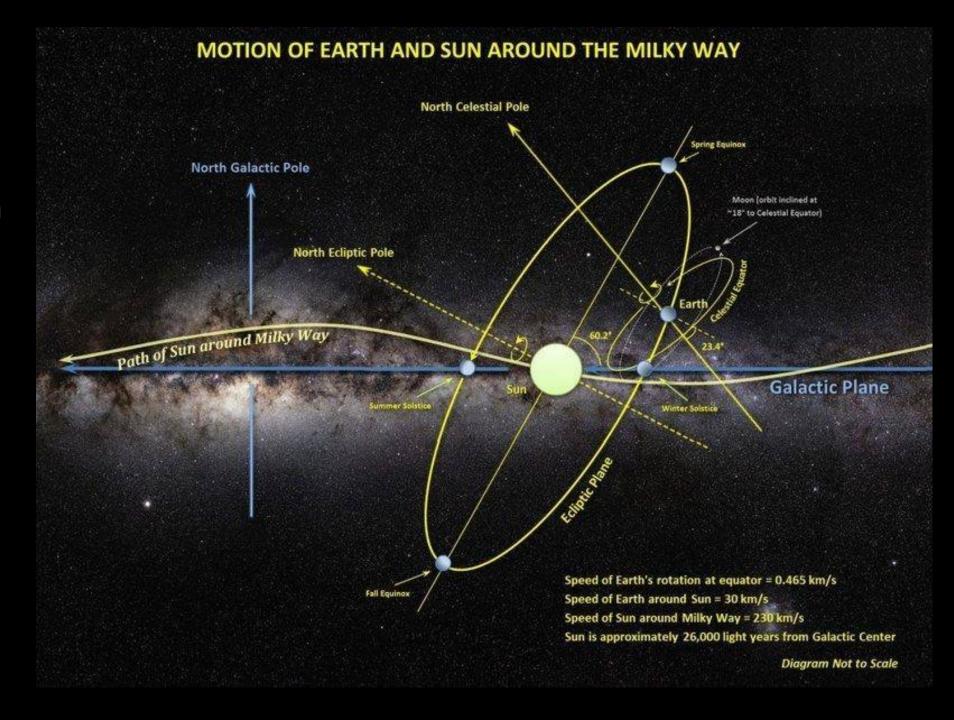

Synodic means "Meeting Place" The Moon or Planets Relationship with the Sun **Tropical Means "Seasonal"** Earth's relationship with the Seasons Sidereal Means "Star" Earth's Relationship with a Star or Stars

A Cosmic Year
takes about
250 million years
for our Solar
System to revolve
around the Milky
way core.

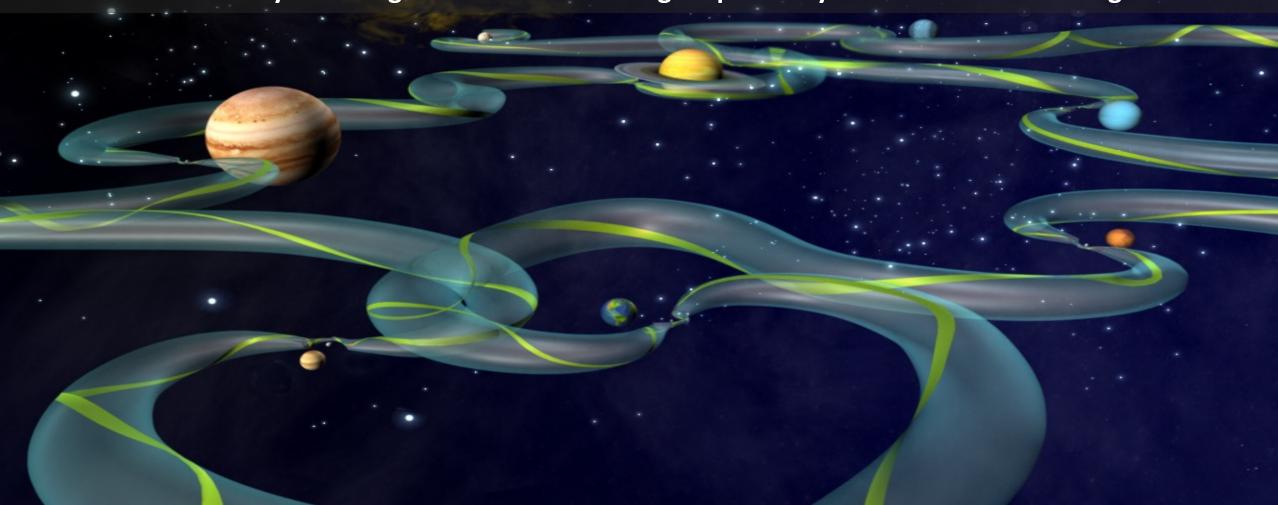

All the planets in our Solar System are moving into a rare alignment with the Galactic Plane.

This is a once in 30 million year occurrence according to Nassim Haramein founder of The Resonance Project.

### Nassim Haramein founder of the Resonance Project from *Crossing the Event Horizon*

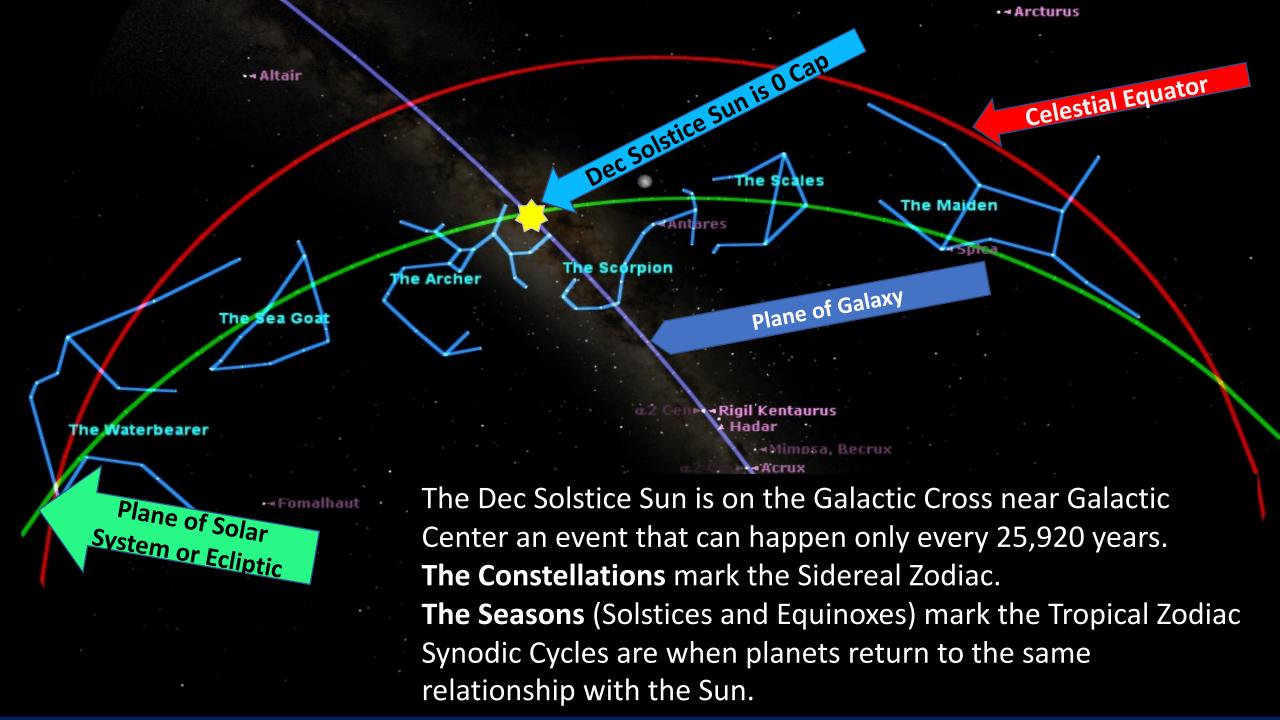

During one Earth year rotating around the Sun our entire solar system moves 47 billion miles through space. And .... each area of space is encoded with new information, meaning we are constantly receiving new codes now being amplified by the Earth's Galactic Alignment.

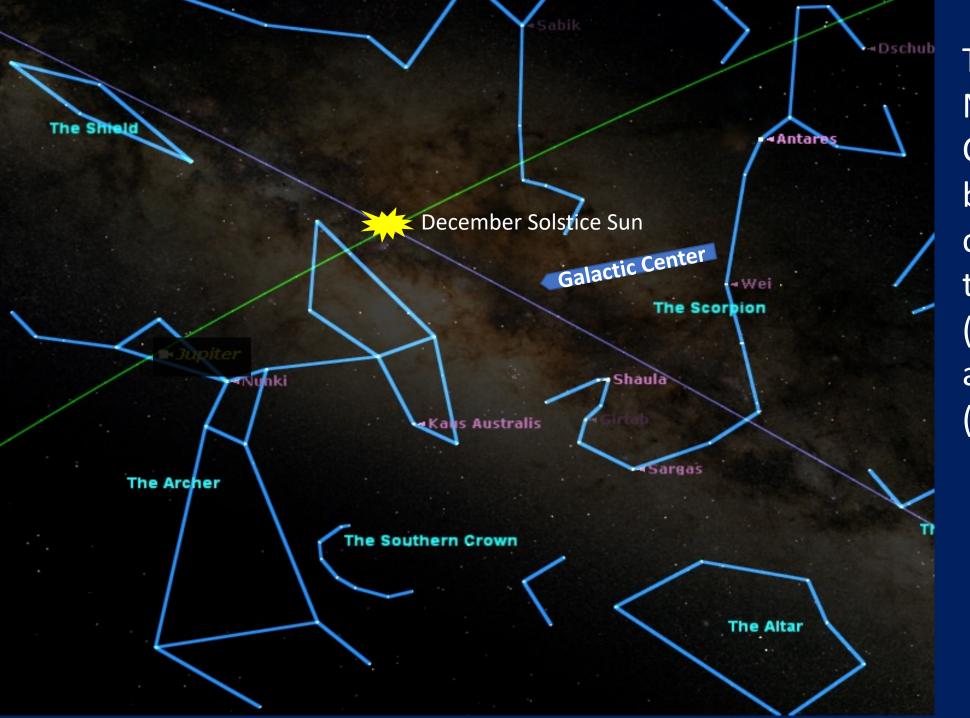

# The Great Galactic New Year Or Why this is WAY Bigger Than the So-Called Age of Aquarius

# The Precessional Cycle (aka the Great Year or Galactic Year)

- The Seasons shift through the constellations 1° every 72 years or 25,920 years - rounded up to 26,000 years
- This cycle was forgotten and the constellations and seasonal signs were named the same names
- Precession is caused by the wobble of the Earth
- This cycle fuels the evolution of awareness due to the interaction of the seasons with the constellations

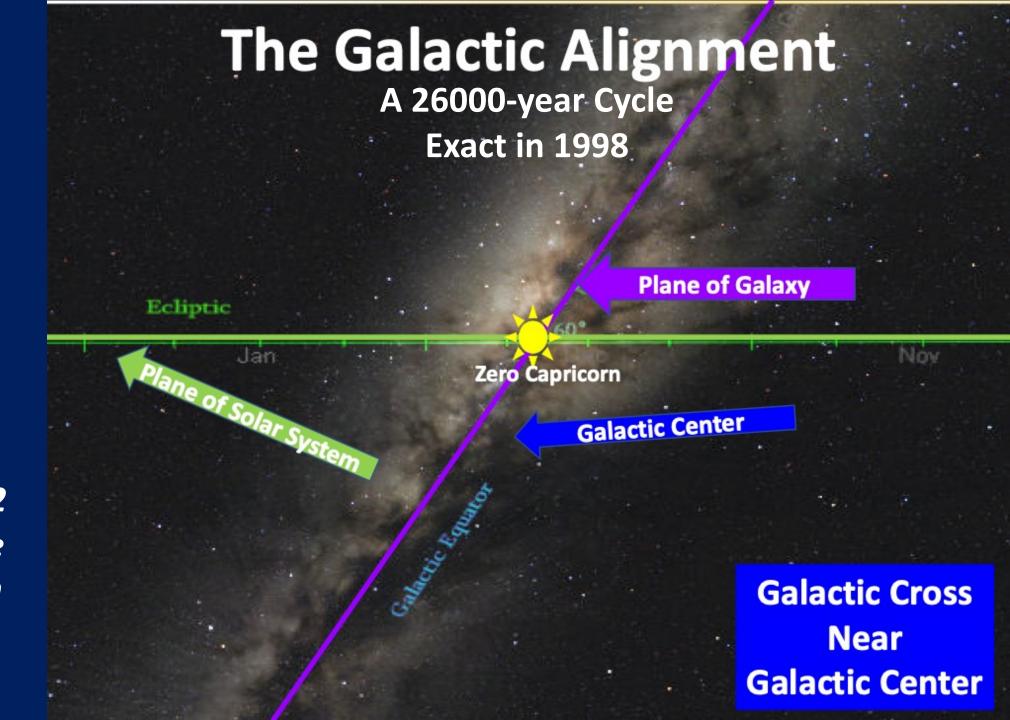

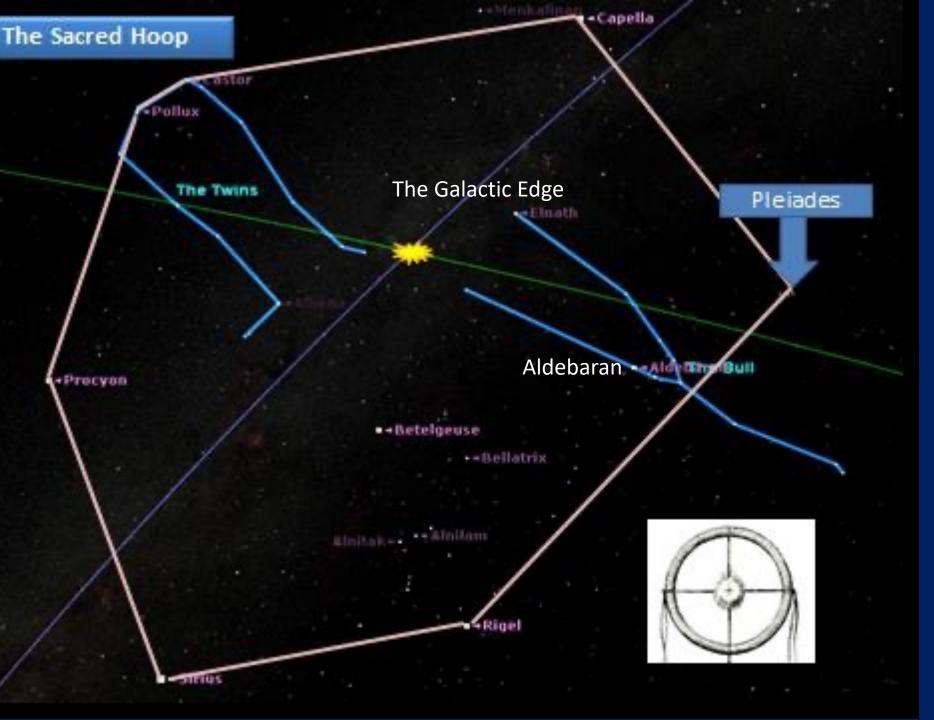

The Galactic Cross Near Galactic Center is located between the constellations of the Archer (a.k.a. Sagittarius) and the Scorpion (a.k.a Scorpius)

The 72 year window with 36 years on either side occurs from 1962 to 2034.

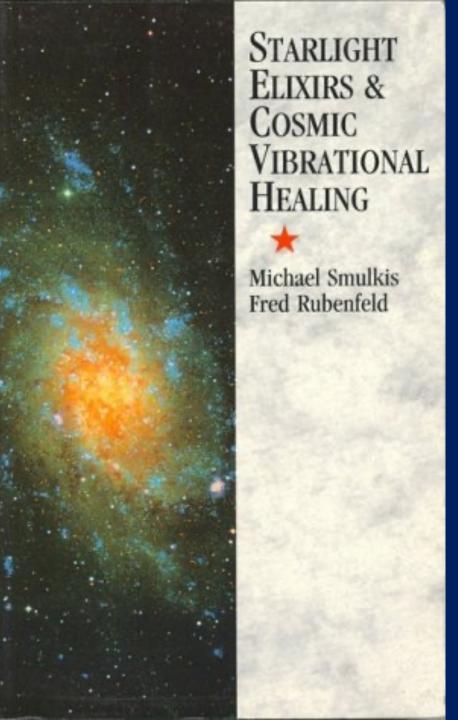

Considering
procession
moves one
degree every 72
years the entire
window is from
1926 to 2070

The Sacred Hoop of Stars as Identified by the Lakota at the Edge of our Galaxy is the Galactic Cross where the June Solstice Sun Rises.

The Stars that mark the Rim of the Hoop are Capella, Castor, Pollux, Procyon, Sirius, Rigel, and the Pleiades

...the process of becoming more aware of the stars, using them in various forms, and understanding their symbolism is an inner journey as well as an outer journey, for many of the things the stars symbolize extend back through human consciousness for millennia and have influenced the development of symbols, legends, and the understanding of consciousness itself.

Each star can provide energy, vibration, and reflection of some aspect of yourself, assisting you - should you seek out and request such help - in order to provide a new sense of your life, your purpose, and your coordination with other humans, plants, animals, and the Earth herself.

~Star Light Elixirs

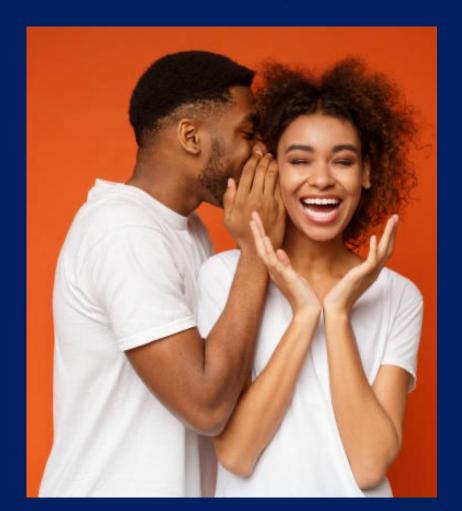

# To What Degree does the Constellation Inform the Sign?

**Essence vs Content or the Evolution of Understanding** 

As the seasonal signs move through the constellations our view of reality changes

This creates an evolution of how we perceive and connect with our reality

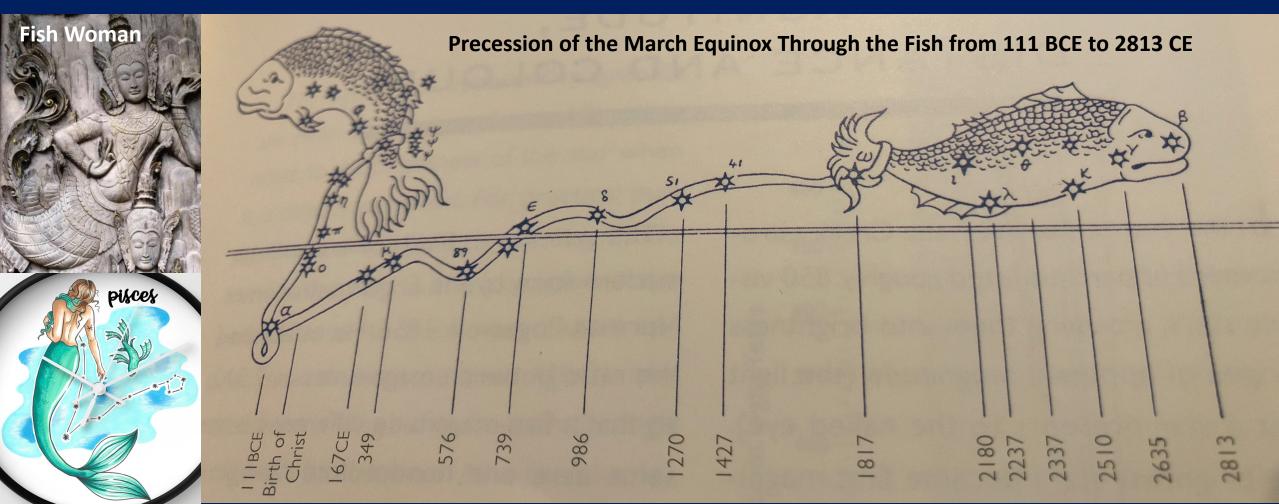

When the March Equinox Moved into the Fish the focus was on Religion (the Fish Constellation) and the religious wars that resulted (Aries) expressing through the Dominator Culture.

#### From the Star Lore Handbook by Geoffrey Cornelius

In Christian culture the fish is identified with Christ as the first fish who was born after the March equinox point had precessed from constellation of the Ram back into the constellation of the Fish marking the transition of a new great age. The ancient form of the fish is thought to have consisted of only one fish.

The Greek astronomer Eratosthenes (born 176 BCE) tells us that the origin of the fish symbolism is DERKE a Syrian Goddess who was half fish half woman. A mermaid?

Knowing the constellations provides clues on how to get from one life to the next life or next world.

## The Constellations: the Importance of Navigating the Sky

According to Rudolph Steiner, it is not enough to have a sentimental view of the stars in the sky.

Steiner reminds us *The Pyramid Texts* state the Stars and Constellations are a direct link to the patterns of the sky and the ability to navigate the in-between realms when one dies and journeys to their next experience.

Also known as navigating the Bardos.

"Bardos" is a term that comes from Tibetan Buddhism referring to the intermediate or transitional state between death and rebirth wherever the rebirth or return to the higher self may occur... For thousands of years, in all cultures, people have been meditating on their favorite stars.

Many rituals have also been focused on these heavenly bodies.

By gazing at certain stars, breathing in their energy and directing that energy to certain areas of the body, profound change is available.

An intention or thought of gratitude and connection can also greatly serve this process.

Not only can the stars and those sentient beings that dwell amongst them broadcast thoughts and energies directly to us in a quick manner but we, too can send our thoughts and feelings to them.

Star meditations can benefit most, and in combination with the appropriate star/planet/nebulae/galaxy/comet elixir, the effect can be felt exponentially.

#### **Starlight Elixirs**

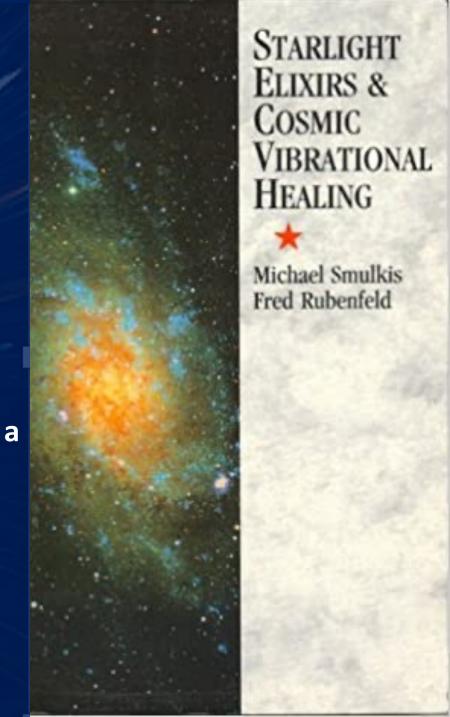

The Atlanteans were most interested in specific properties of the stars as a way to strengthen those energies within...

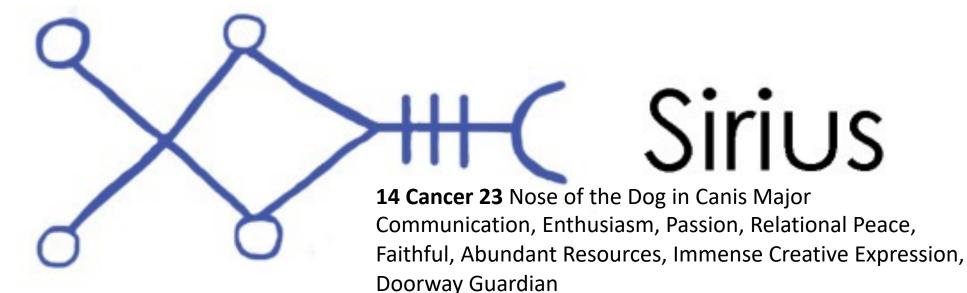

Using resonating crystals to form a latticework at an etheric level they knew how to transfer or translate star energy that was captured in various ways utilizing oscillating crystal matrices or other technological devices to inform specific DNA patterns.

They captured starlight energy into water to help them create a more direct connection with the stars.

Ancient cultures began this practice with the brightest stars in our night sky.

~ Starlight Elixirs and Cosmic Vibrational Healing by Michael Smulkis and Fred Rubenfeld published in 1992

Sirian

Planets: Venus Herb: Juniper

Stones: Beryl, Aquamarine

**Color: Blue White** 

Incense: Frankincense, Myrrh

Copal, Dragon's Blood

#### Sirius is 25.4 times more Luminous that our Sun

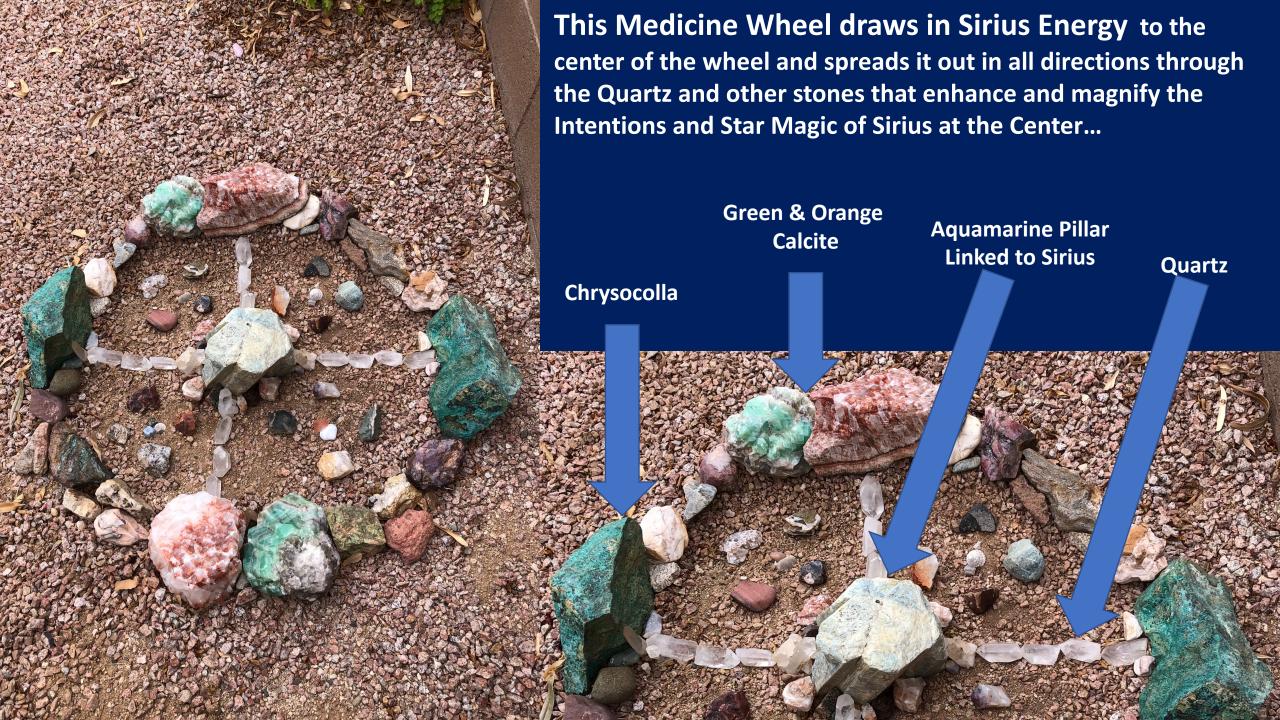

connecting with Sirius sets up an internal vibrational resonance between the physical, mental, emotional and spiritual bodies creating a state of harmony while viewing the star. Using visualization and intention increases the effect. "Starlight Elixirs"

Looking East about 75 Minutes before sunrise in early to mid August depending on your latitude. Sky Map from Earthsky.org

"Meditation on a star or the utilization of a star elixir can experientially bring into people a deeper awareness connecting them to this much higher realm of consciousness.

This will be unique and special for each person.

The stars speak to us, to inspire and encourage our collective learning.

Most significantly, they suggest a course to follow on our life's journey....
